

Let's develop something...

apsolut is a young consulting company focused on optimizing business processes in purchasing. In addition to strategic purchasing consulting, our consulting services include implementation of software solutions for eProcurement, vendor management, strategic purchasing (sourcing), master data harmonization, and tailored customer solutions.

Consulting covers all aspects of a holistic approach. In our opinion, consulting concerns not only the analysis and conceptual design of a suitable purchasing solution, but also implementation strategy consulting, process design, customer-oriented enhancements, and all aspects of project management.

To be able to satisfy this holistic requirement, our portfolio also includes contiguous topics such as technology and infrastructure consulting. apsolut's branch offices in Bielefeld and Leinfelden-Echterdingen offer this portfolio to customers of all sizes, from all industrial sectors, both nationally and internationally, thus ensuring a broad and varied environment with different areas of specialization.

We wish to further expand our service offering and therefore seek the following person to support our consulting team:

ABAP Developer (m/f) *for SAP Logistics Processes*

Your tasks will include developing and implementing software packages in the SAP SRM module area.

You fit the bill if you have successfully completed your studies in information systems, industrial engineering or business studies or if you can provide evidence of having received a comparable education. You have several years of experience as an SAP developer working in Internet technologies. You have in-depth development knowledge of the SAP Internet Transaction Server and the SAP Web Application Server, ideally in a Web Dynpro environment. Furthermore, you have very good knowledge of the ABAP Workbench, the Data Transfer Workbench, and the ABAP Dictionary. Ideally, you are very familiar with the Exchange Infrastructure or SAP Business Connector as well as the integration technology based on RFC and IDOCs/ALE/XML. Some first-hand experiences of the SAP SRM modules, the ability to work within a team, flexibility, and a willingness to travel complement your profile.

Do you attach great importance to excellent development prospects, innovative methods, being part of a qualified and motivated team as well as receiving an attractive remuneration package? If so, we should get to know each other.

If you identify with the above profile, contact Tatjana Bernhard (personal@ap-solut.com) in complete confidence.
