

ALL INCLUSIVE PACKAGE

# Joule Agent Hackathon

Five days, one working Joule Agent. We build alongside your team — from concept to deployable prototype, with expert coaching at every step.

Sergen Batman · Manager SAP Business AI

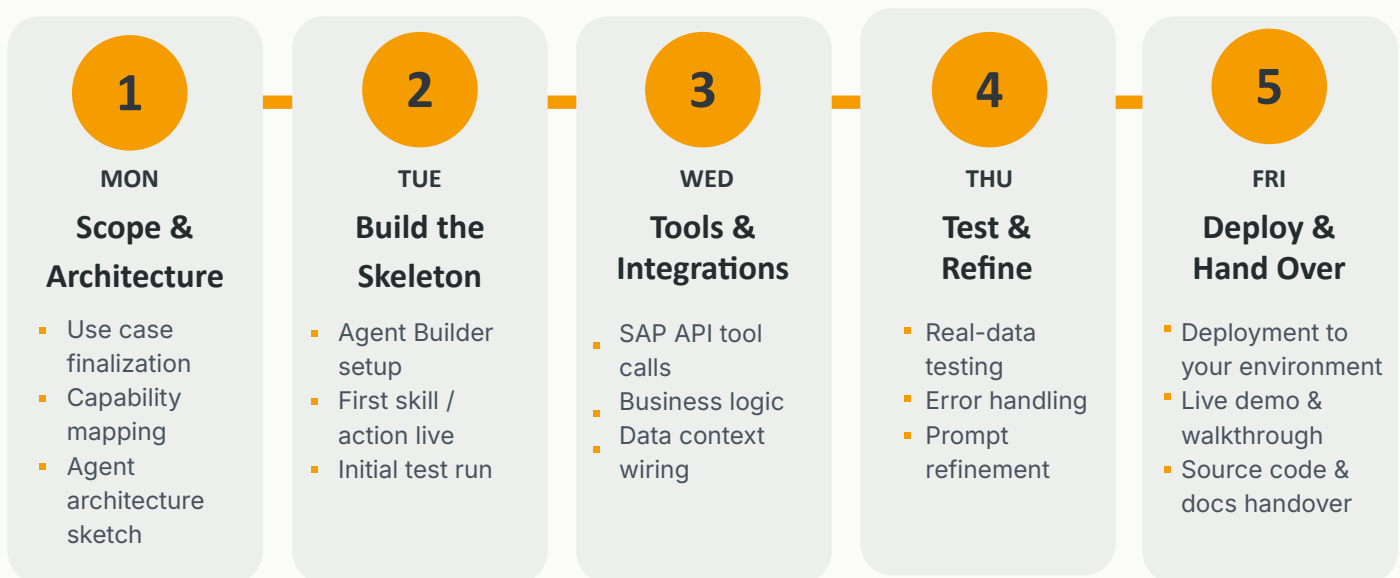

## Have ideas and SAP BTP ready?

**You've identified the use case. Your platform is up and running. Now you want a working Joule Agent — not next quarter, but next Friday.**

This is the package for teams who are ready to build. In a focused one-week sprint, our SAP AI specialists pair-program with your developers to deliver a fully functional, custom Joule Agent — production-ready and tested against your real business processes.

## The five-day sprint

A focused timeline from idea to deployable agent — co-built with your team.

## Why a hackathon format?

Most AI projects stall in committee. A focused sprint forces decisions, removes blockers in real time, and produces a working artifact your team can show off — and build on.

Our specialists don't deliver the agent to you; they build it with you. Your developers learn the patterns, conventions and pitfalls of Joule Agent development hands-on — so the next agent you build solo lands faster.

## Your team brings

- **1–2 developers** with SAP BTP and ABAP/JavaScript experience
- **1 process owner** who knows the business case end-to-end
- **A defined use case** — ideally already scoped in a prior Discovery Workshop
- **An active SAP BTP environment** with AI Core and Joule entitled

FRIDAY AFTERNOON, NOT NEXT QUARTER

**Production-ready, not a slide deck**

You leave the week with a deployed, tested, and documented Joule Agent — plus the source code and architectural patterns to build the next one without us.

## What you take away

**A custom Joule Agent** — fully functional, tested with your data, deployed in your environment.

**The full source code** — yours to extend, version-control and operate, with no lock-in.

**Architectural patterns & documentation** — so your team can build the next agent without external help.

**Developer enablement** through a full week of pair programming with absolut's SAP AI specialists.

**A live handover demo** for your stakeholders, ready to show the value to leadership on Monday.

## Details

### Format

**Five-day intensive sprint with pair programming**  
Daily standups, midweek checkpoint, Friday demo

### Dauer

**5 working days (one calendar week)**

### Delivery model

**On-site at your offices preferred for maximum velocity, hybrid possible**

### Roles involved

**SAP AI specialist & Joule developer on absolut's side · 1–2 developers and 1 process owner on yours**

### Prerequisites

**Defined use case & active SAP BTP environment with AI Core and Joule**

If your BTP isn't ready yet, see our SAP Business AI Infrastructure Setup package

### Investment

**On request**

Fixed price after the scoping call

### Ready for the sprint?

Schedule a free 30-minute scoping call. We'll review your use case and confirm the hackathon is the right fit before you commit.
