

ALL INCLUSIVE PACKAGE

# Set up **SAP Business AI**

We build the technical foundation for SAP Business AI — production-ready, secure and operational from day one. Including Joule, AI Foundation and full BTP configuration.

## Searching for infrastructure?

You know which AI use cases you want to deliver — but the technical foundation isn't there yet? That's where we come in.

We architect and implement the full SAP Business Technology Platform foundation in five sequenced phases — from the first subaccount to productive Joule activation in S/4HANA and Ariba. All from one team, aligned with your security and governance requirements.

## Our delivery path

Five phases, executed in sequence — each with its concrete activation tasks.

1

### BTP Foundation

Setup of your BTP environment based on best practices — fully documented and ready for handover.

- **SAP BTP account & subaccounts** — provisioning per environment (Dev/Test/Prod)
- **Entitlements, quotas & spaces** — aligned with your usage profile

2

### Identity & Connectivity

Centralized identity management and secure connectivity to your existing landscape.

- **SAP Cloud Identity Services** — IAS and IPS configuration
- **Cloud Connector & destinations** — secure on-premise integration

3

### AI Foundation

Provisioning of the AI services and connection to your data sources for downstream applications.

- **SAP AI Core** — runtime for AI scenarios incl. Generative AI Hub
- **SAP AI Launchpad** — central management of AI scenarios and deployments

4

### Joule Activation

Standard Joule capabilities live across your SAP applications — immediately usable for end users.

- **SAP Build Work Zone** — central copilot entry point
- **Joule in S/4HANA Cloud & SAP Ariba** — validated against real business processes

5

### Security & Governance

A complete framework for compliant operations — aligned with GDPR and ISO 27001.

- **Roles & authorization concept** — audit trail and data protection
- **Monitoring & alerting** — Cloud ALM & SAP BTP Cockpit

PRODUCTION-READY FROM DAY ONE

**You take over — we stay close**

After setup you receive complete technical documentation and a structured handover workshop — and on request we continue to support you in operations.

## What you get

**A production-ready BTP environment** — set up, documented and immediately usable for AI applications.

**Activated Joule capabilities** in SAP Build Work Zone, S/4HANA Cloud and Ariba — standard scenarios usable from go-live.

**A robust security and governance concept** — identity management, roles, audit trail and GDPR conformity.

**Complete technical documentation** of your configuration including architecture diagrams, handover protocol and operations manual.

**Knowledge transfer** to your IT team through a structured handover workshop.

## Details

### Format

**Implementation package with a fixed delivery structure**

Incl. architecture workshops and hands-on configuration

### Duration

**4 to 8 weeks**

Depending on complexity and number of environments

### Delivery model

**Remote or hybrid, with on-site sessions for architecture and handover**

### Roles involved

**SAP BTP architect, AI specialist, security consultant on apsolut's side · IT architecture, Basis and Security on yours**

### Prerequisites

**An existing SAP landscape (S/4HANA Cloud, Ariba or comparable)**

BTP licensing is clarified during the briefing

### Investment

**On request**

Fixed price after the architecture briefing

## Ready to build?

Schedule a free architecture briefing — we'll review your starting point and outline the right setup path for your context.
